

Calcolare

$$\lim_{x \rightarrow 0^+} (1 + \log(1+x))^{\frac{\sqrt{x}}{\sin(3x\sqrt{x})}}$$

Risulta:

la base $\lim_{x \rightarrow 0^+} (1 + \log(1+x)) = 1$

l'esponente $\lim_{x \rightarrow 0^+} \frac{\sqrt{x}}{\sin(3x\sqrt{x})} = \lim_{x \rightarrow 0^+} \frac{3x\sqrt{x}}{\sin(3x\sqrt{x})} \cdot \frac{1}{3x} = +\infty$

$$\left(\lim_{x \rightarrow 0^+} \frac{3x\sqrt{x}}{\sin(3x\sqrt{x})} = 1 \quad \text{e} \quad \lim_{x \rightarrow 0^+} \frac{1}{3x} = +\infty \right)$$

Pertanto il limite proposto si presenta nelle
forme indeterminate 1^∞

Utilizziamo il limite notevole di Neper:

$$\text{e } \lim_{x \rightarrow x_0} f(x) = 0 \Rightarrow \lim_{x \rightarrow x_0} (1 + f(x))^{\frac{1}{f(x)}} = e$$

$$\lim_{x \rightarrow 0^+} \left[(1 + \log(1+x))^{\frac{1}{\log(1+x)}} \right] \cdot \log(1+x) \cdot \frac{\sqrt{x}}{\sin(3x\sqrt{x})}$$

Risultato:

$$\lim_{x \rightarrow 0^+} \left[(1 + \log(1+x))^{\frac{1}{\log(1+x)}} \right] = e$$

$$\begin{aligned} \lim_{x \rightarrow 0^+} \log(1+x) \cdot \frac{\sqrt{x}}{\sin(3x\sqrt{x})} &= \lim_{x \rightarrow 0^+} \frac{\log(1+x)}{x} \cdot \frac{x\sqrt{x}}{\sin(3x\sqrt{x})} \cdot \frac{1}{3} \\ &= 1 \cdot 1 \cdot \frac{1}{3} \end{aligned}$$

Donque

$$\lim_{x \rightarrow 0^+} (1 + \log(1+x))^{\frac{\sqrt{x}}{\sin(3x\sqrt{x})}} = e^{\frac{1}{3}}$$
